## Shoulder Rehabilitation Technology Company of the Year 2025

We are thrilled to announce that Titin KM Biomedical has been named the “Shoulder Rehabilitation Technology Company of the Year 2025” by Medical Tech Outlook. This prestigious recognition underscores our ongoing dedication to innovation and excellence in the field of shoulder rehabilitation.

## Why Titin KM Biomedical?

MedTech Outlook highlighted Titin KM Biomedical for our significant advancements in rehabilitation technology, specifically through our groundbreaking product, the Humero Tech C1. Developed and manufactured in the USA, the Humero Tech C1 has revolutionized shoulder rehabilitation by addressing critical gaps left by traditional rehabilitation practices.

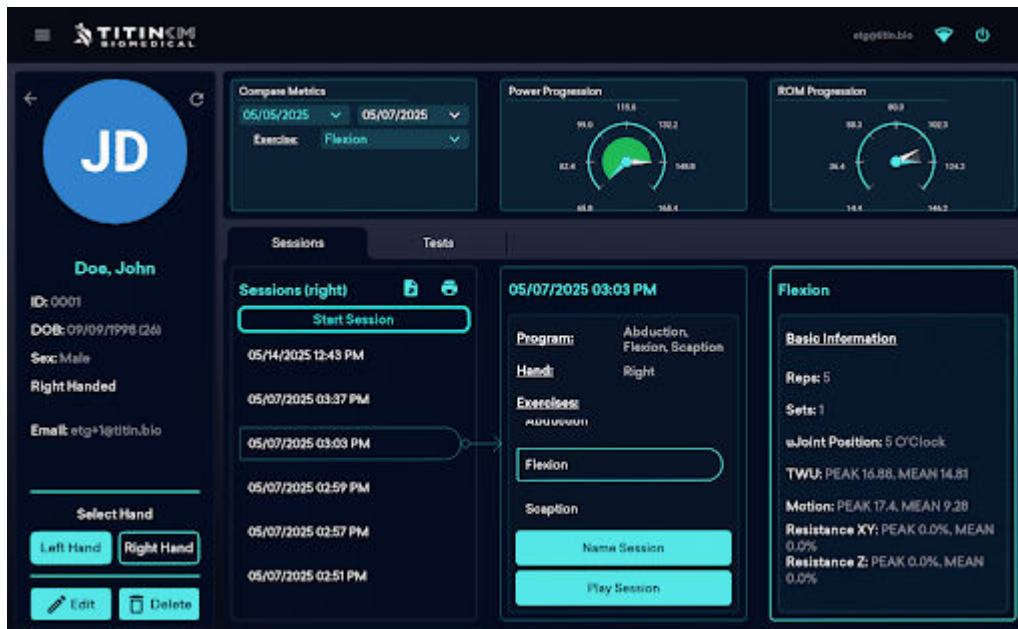

## Humero Tech C1 Features

### The Power of the Humero Tech C1

---

The Humero Tech C1 sets a new standard in shoulder therapy by offering continuous omnidirectional resistance and multiplanar training capabilities. Its real-time feedback on force, motion, and strength values is controlled through a custom application, providing invaluable insights for healthcare providers.

## Key Features Include:

1. **Continuous Omnidirectional Resistance:** Allows targeted, effective strengthening exercises.
2. **Multiplanar Training Capabilities:** Enhances rehabilitation through versatile training options and ability to perform functional patterns.
3. **Real-Time Performance Tracking:** Offers immediate data feedback, ensuring precise, evidence-based adjustments in treatment plans.
4. **Dynamic Strength Values:** Captures comprehensive strength assessments to guide rehabilitation.

**Bilateral Use:** Ensures flexibility for both shoulders in recovery processes.

## Addressing the Gap in Traditional Rehabilitation

Current Clinical Practice Guidelines (CPG) clearly state that traditional assessment methods like Manual Muscle Testing (MMT) are inadequate for modern rehabilitation needs. Titin KM Biomedical's Humero Tech C1 directly addresses this issue by providing objective, quantifiable data that aligns with these modern guidelines. This shift is vital for improving patient outcomes, enhancing clinical efficiency, and ensuring compliance with contemporary standards.

## Enhancing Patient and Provider Experiences

By utilizing advanced technology, the Humero Tech C1 empowers medical providers to make informed, data-driven decisions, ultimately helping lead to better patient outcomes. The device has the potential to not only speed up recovery times but also significantly improve the overall rehabilitation experience by offering personalized, effective treatment plans.

## Commitment to Excellence and Innovation

---

Receiving this distinguished award further motivates our team at Titin KM Biomedical to continue pushing the boundaries of rehabilitation technology. Our mission remains clear: to improve the quality of life for patients recovering from shoulder injuries and to support healthcare providers with tools that enhance treatment efficacy and efficiency.

We are immensely proud of this achievement and look forward to continuing our journey towards even greater innovations in shoulder rehabilitation.

The Titin rotator cuff machine helps streamline recovery from rotator cuff injuries and aims to redefine the standard rehab process. By combining fluid-motion technology with in-depth metrics, patients can build strength and track the results of their rehab. Unlike rubber bands and dumbbells, our technology actually shows patients their progress, helps improve their rotator cuff strength, and supplies data to aid them in making informed decisions about recovery.
